Kai Tak Sports Park

Visual brand guide rebuilt from accessible first-party social posts. Supersedes the earlier provisional guides.

THE SYSTEM TO PRESERVE

One destination.
Several publication families.

52 publication records with visual evidence. Actual artwork, format distinctions, component rules and production workflows.

Sources shown: IG01, IG09, WB02, LI07, YT01 and YT19. Reproduced for analysis. This is a working guide derived from public posts, not KTSP's official identity manual.

What was actually inspected

A purposeful sample of accessible publications, not a complete archive or a statistically representative performance audit.

CHANNEL	VISUAL SAMPLE	DEPTH AND LIMIT
Instagram	12 post covers	Current grid: 21-27 Oct plus pinned 30 Sep cover. Covers and carousel indicators inspected; captions and inner slides blocked.
LinkedIn	10 posts	9h-3w UI dates. Captions, albums and media previews inspected. Two PDF previews; interiors not opened.
YouTube	24 video thumbnails + 1 Short	Current and archive examples, 2w-1y UI dates. One video sampled at five timestamps; other playback not audited.
Weibo	5 individual posts	2 Sep-6 Oct event context. All 15 monthly and 10 reminder gallery previews inspected; selected full assets inspected.
Facebook	0 visual post records	One football-post text preview seen. Login gate prevented a usable artwork/feed sample.
Xiaohongshu	0 visual post records	30 note titles briefly visible; login redirect blocked artwork inspection. Titles do not establish design patterns.
Douyin	0 visual post records	Profile shell accessible; feed error/login prevented post inspection.

52 = 12 Instagram + 10 LinkedIn + 24 YouTube thumbnails + 1 Short + 5 Weibo posts. Image counts within a gallery do not inflate the post count. Relative dates are preserved as shown on 27 Oct 2026.

How the social presence is operating

The visible output serves visitor planning, event demand, community participation and corporate reputation.

VISITOR SERVICE IS A SUBSTANTIAL STRAND

5 of 12 sampled Instagram covers concern access, transport, security or reminders. The pinned purple guides and red reminder cards form recognizable service systems.

PROMOTERS RETAIN THEIR OWN IDENTITIES

5 of 12 Instagram covers promote events through distinct supplied or event-specific artwork. Photography, illustration, lettering and palettes change with the event.

LINKEDIN TELLS THE INSTITUTIONAL STORY

The 10-post visual sample contains 5 photo albums, 2 native videos, 2 PDF documents and 1 designed collage. Captions emphasize outcomes, partners, people and inclusion.

WHAT ALREADY WORKS

Repeated service framing; a clear Chinese/English information hierarchy in many graphics; real venue and people photography; flexible event identities; practical multi-image information packs.

WHAT NEEDS CARE

Small English lines and legal footers are hard to read at feed scale. Gallery crops can conceal original edges. Campaign typography varies intentionally, so a single universal poster template would erase useful distinctions.

Evidence boundary
These observations describe content and design. Reach, saves, watch time, paid distribution, conversions and internal production performance were not available. No claim of commercial effectiveness or ranking between channels is made.

The publication families

Choose the family from the communication job before choosing a canvas. The guide's names below are descriptive labels.

Purple event guide

Event-specific navigation and practical guidance

IG01 / Instagram / Open source post

Red operational

Venue rules, screening, transport and reminders

IG09 / Instagram / Open source post

Monthly programme

Recurring editorial cover + event cards + summary

IG03 / Instagram / Open source post

Promoter artwork

Artist, sport or partner-owned event identity

IG05 / Instagram / Open source post

Seasonal campaign

A separate creative world for a seasonal activation

WB01 / Weibo / Open source post

Corporate photography

Albums documenting participation and outcomes

LI02 / LinkedIn / Open source post

Branded editorial

Designed collage or document cover with red court lines

LI07 / LinkedIn / Open source post

Video families

Event recaps, documentary series and isolated Shorts

YT01 / YouTube / Open source post

Purple event guides

Two covers for the same event repeat the frame, information order and typography hierarchy.

IG01 / Instagram / 2026-10-24

IG02 / Instagram / 2026-10-23

SEPARATE THE LAYERS

1. Purple diagonal-strip background.
2. Small white venue logo at upper left.
3. Centered event name, then date and venue.
4. Large white, square-corner inner panel.
5. Bold Chinese task title; smaller English below.
6. Dense footer notice outside the white panel.

MATCH THIS FAMILY

Keep the repeatable frame and change the practical subject. Preserve the event header and date context on both covers. Treat the purple as this observed event-guide treatment, not a mandatory colour for every guide.

Evidence: 2 related covers, one event. This supports a paired template, not a claim that all events use purple. The inner carousel sequence could not be inspected.

Red operational publications

Three cover treatments share a frame while changing the information density and focal element.

IG08 / Instagram / 2026-10-23

IG09 / Instagram / 2026-10-23

IG10 / Instagram / 2026-10-22

FRAME

Red, pink and burgundy diagonal strips surround a rounded white information panel.

MESSAGE HIERARCHY

Chinese leads; English supports. A central line icon can replace a text-only title. Grey bands carry topic or dates.

FOOTER

A compact notice sits at the bottom. It is separate from the headline and operational instruction.

Matching rule: Build separate variants for a cover, a single-rule card and a transport/date notice. Keep the framing consistent; allow the body to change. The security post is a dense notice, while the reminder cover uses a large alert icon.

A reminder package has an internal sequence

WXV on Weibo provides the strongest inspected evidence of the practical multi-image system.

1 Cover

2 Containers

3 Food and drink

4 Umbrellas

5 Drinking water

6 Accessibility

7 Prohibited items

8 Prohibited items

9 Prohibited items

10 Locker map

WB03 / Weibo / 2026-09-11 18:40 (post UI; year from event context)

These are captured gallery previews, which crop the original 3:4 cards. All 10 preview tiles were inspected. The original asset dimensions exposed by the page were 960 × 1280; small-print wording was not audited.

Observed sequence: introduce the pack → answer single visitor questions → consolidate restrictions → finish with a useful location map. Recommended build: maintain a shared frame, but use distinct icon, list and map layouts.

Monthly programme: cover and event card

A recurring red editorial identity introduces a more colourful information system inside the package.

4:5

Observed source assets are approximately 960 × 1200.

WB02 / Weibo / 30 Sep 2026 / full cover and two event cards

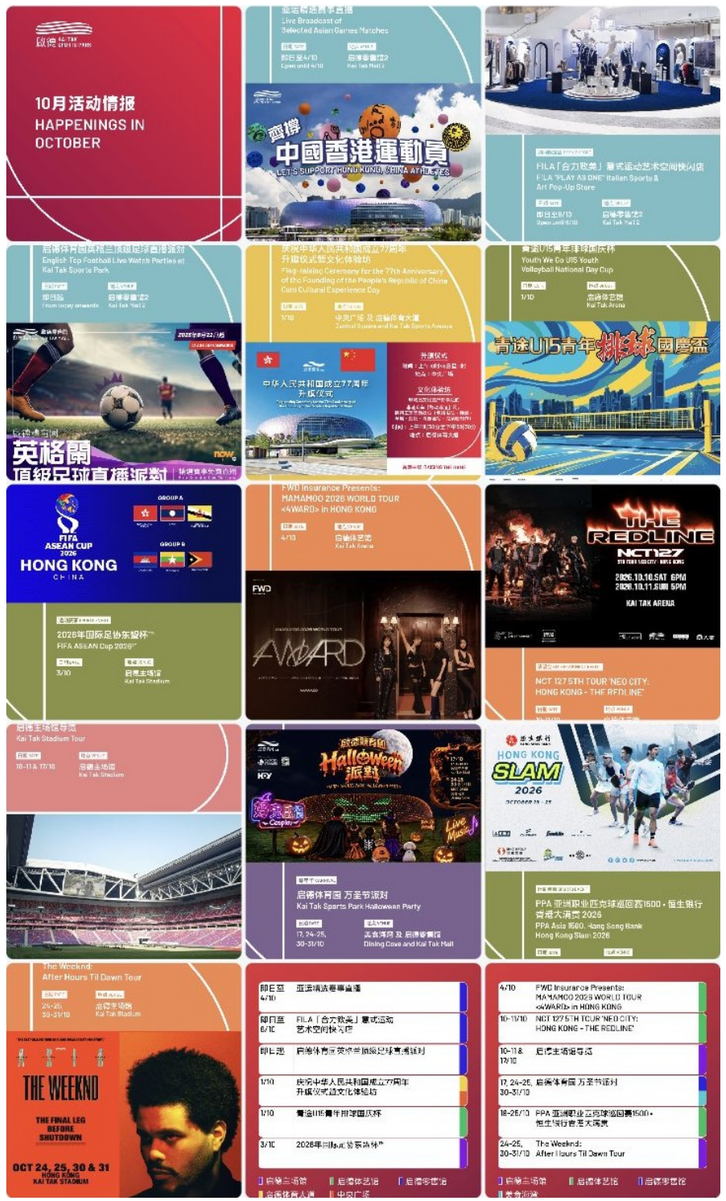
Cover
Red gradient; white logo; left-aligned month heading; fine white court arcs and straight lines.

Event card A
Coloured information panel above event artwork. Category, title, date and venue are distinct fields.

Event card B
Artwork above the information panel. The layout can flip while preserving labels and court-line graphics.

Monthly programme: the complete visible pack

15 images: one cover, twelve event cards and two summary-calendar pages.



A CONTROLLED SYSTEM WITH VARIABLE CONTENT

The inside pages use teal, olive, yellow, orange, coral and lilac/purple fields. The structure stays stable while each event retains its own photograph or key artwork.

THE TWO CLOSING PAGES DO A DIFFERENT JOB

The final pages condense the programme into tables with a venue-colour legend. They are reference pages, not additional hero posters.

MATCH THE PACKAGE, NOT ONLY THE COVER

Create a month cover, event-card variants and a summary-table variant. Maintain a field list: category, bilingual title, date, venue and approved event asset. Check all dates against the source event information before publication.

WB02 / Weibo / 2026-09-30 18:43 (post UI; year from event context)

Left: original public gallery view, cropped to the 15 official tiles. Square gallery previews crop the 4:5 originals. The gallery proves sequence and variation; it is not an export-size reference.

Promoter and partner artwork stays distinct

Concert, football, festival and ticket information do not all use the venue's operational frame.

IG04 / Instagram / 2026-10-27

IG05 / Instagram / 2026-10-26

IG06 / Instagram / 2026-10-26

WB05 / Weibo / 2026-09-02 11:15 (post UI; year from event context)

WHAT CHANGES

Type treatment, illustration or artist photography, headline placement, sponsor lockups and colour all follow the event identity.

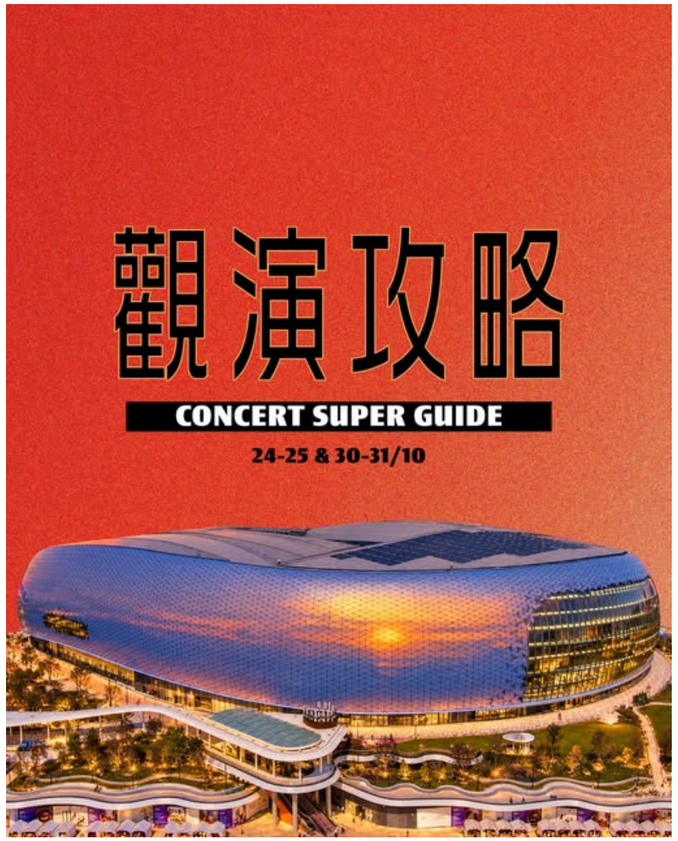
PRODUCTION IMPLICATION

Request the approved event artwork and its correct crop variants. Check venue, date and ticket details. Add a separate KTSP service post when necessary; do not repaint every promoter poster into a house template.

WB05 is a four-image pack: campaign cover, seat map, VIP benefits and presale guide. The reference is a gallery preview, with lower edges cropped by the browser viewport.

Editorial and seasonal campaigns

Two visibly different treatments sit outside the operational and monthly systems.



IG07 / Instagram / 2026-10-23

WB01 / Weibo / 2026-10-06 09:55 (post UI; year from event context)

CONCERT SUPER GUIDE

Orange texture, large condensed black Chinese lettering, a small English label and a stadium image. This is an editorial feature cover, not the purple practical-guide cover.

HALLOWEEN CAMPAIGN

Dark night scene, orange dimensional lettering, moon and pumpkins, neon sign accents, family/pet imagery and a dedicated partner-logo area.

These are individual observed treatments. They establish permitted variety in the current presence, not a recurring template frequency or an official permanent palette.

LinkedIn: documentary photography

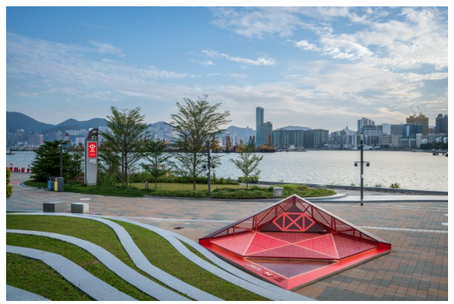
Five of the ten visually reviewed posts use native photo albums. The photographs are the publication assets.

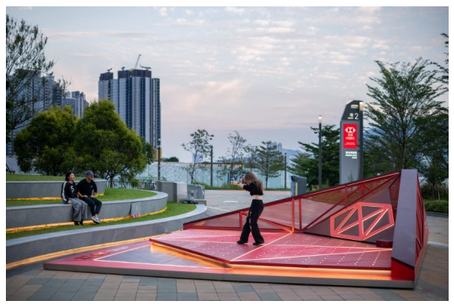
Sport: action → venue scale → achievement

LI02 / LinkedIn / Open album source

Corporate event: speakers → audience → group

LI05 / LinkedIn / Open album source





Place launch: installation → setting → use

LI08 / LinkedIn / Open album source

These are selected original album images, arranged here for comparison. LinkedIn’s on-feed multi-image mosaic is platform UI; it should not be copied as a branded graphic template.

LinkedIn: designed collage and documents

Brand graphics are used selectively alongside photography. These are separate publication formats.

LI07 / LinkedIn / 2w before 27 Oct 2026 (UI label)

DESIGNED SINGLE-IMAGE COLLAGE

Red gutters, a central message tile, a red gradient footer, white logo and court-line graphics. This is baked into the image, unlike LinkedIn’s native album arrangement.

LI10 / LinkedIn / 3w UI date / 8-page PDF preview

PDF DOCUMENT POST

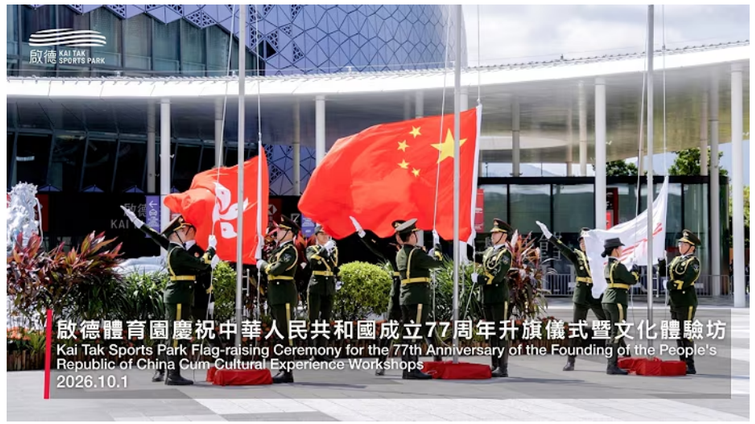
The Team HKG preview combines a red branded heading with a photograph. LI10 explicitly shows eight pages. LI01 repeats a related red document-cover treatment; only its partial preview was visible.

PDF interiors were not inspected. The eight-page label does not justify inventing slide-by-slide content or a universal document length.

YouTube: event and venue thumbnails

Repeated elements include real imagery, a small white logo and a compact bilingual title area. Variants exist.

YT01 / YouTube / Open video source



YT02 / YouTube / Open video source

YT07 / YouTube / Open video source

YT11 / YouTube / Open video source

YT23 / YouTube / Open video source

YT24 / YouTube / Open video source

Common pattern: Chinese headline above smaller English, often on a lower strip with a slim red vertical accent. Logo position and title alignment vary. The venue, people or action remain the main image.

These are thumbnails, not proof that the entire video uses the same graphics. Twenty-four video thumbnails are included in the reference library.

YouTube: the documentary series is its own system

Archive references show a richer typographic and photographic treatment than the event recaps.

YT14 / YouTube / Archive video source

YT16 / YouTube / Archive video source

YT17 / YouTube / Archive video source

YT18 / YouTube / Archive video source

YT19 / YouTube / Archive video source

YT20 / YouTube / Archive video source

Brush-like Chinese lettering, italic English support, portrait/venue montages and pale teal or yellow accents form a coherent series vocabulary. Related documentary covers include production credits. Exact typefaces were not identified.

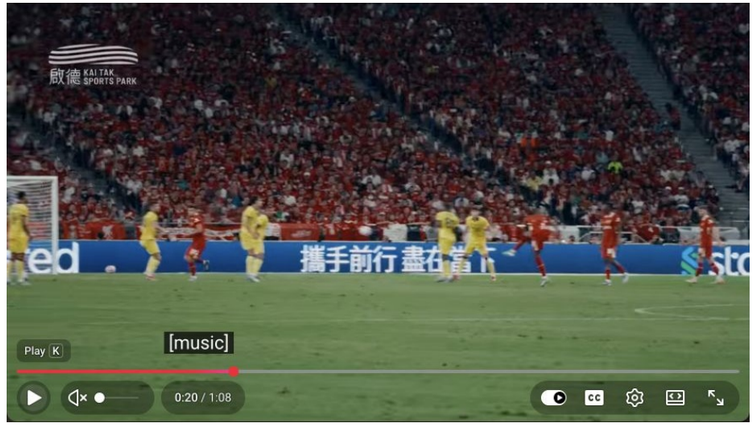
Do not use this archive series as evidence of today’s routine feed template or force operational notices into this expressive typography.

VIDEO / LIMITED PLAYBACK SAMPLE

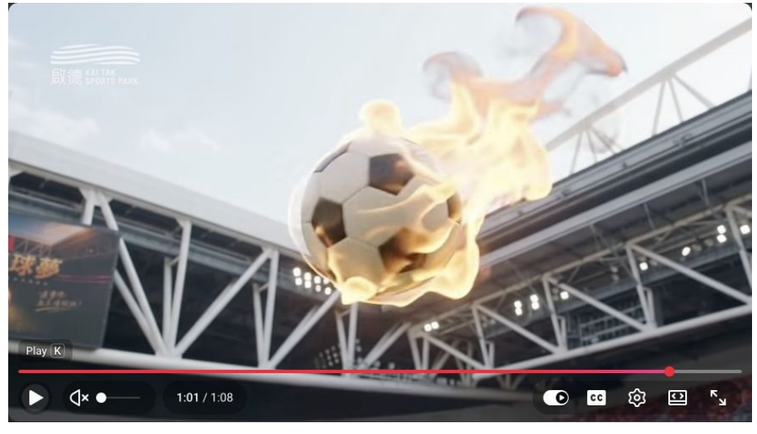
Motion: what the sampled footage supports

Golden Football Dream was inspected at 0, 5, 20, 44 and 61 seconds of a player showing 1:08.

05 sec / Visitors in the venue



20 sec / Football action



61 sec / Animated football over the stadium

OBSERVED

A white KTSP logo persists at upper left in the sampled frames. The sequence moves through venue context, participants, sport and a stylized football moment. A press-room scene was also seen at 44 seconds.

WHAT THIS DOES NOT ESTABLISH

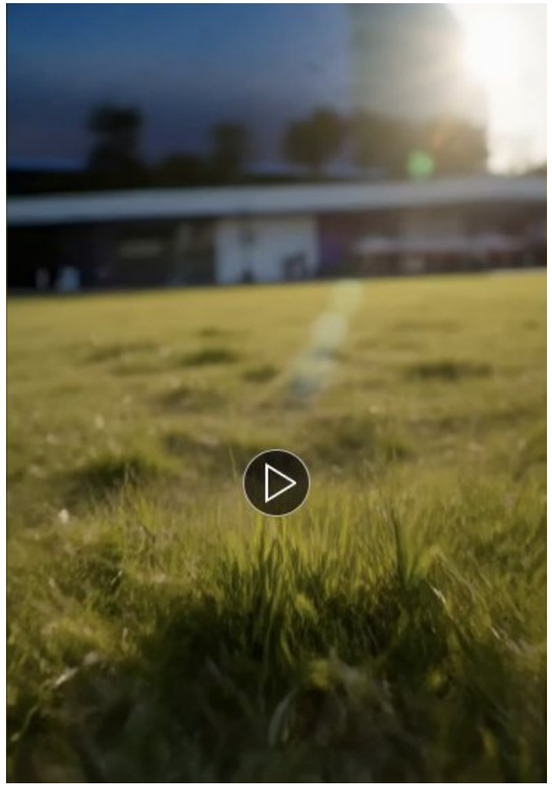
The full edit, opening/closing animation, soundtrack structure, caption coverage and all transitions were not audited. There is no basis to prescribe one standard video duration or outro from this sample.

YT01 / YouTube / Golden Football Dream / sampled playback, not full viewing

Player chrome and caption overlays remain in these evidence captures. They are not KTSP’s artwork. The matching subject also appears as a landscape native video on LinkedIn (LI09). Exact file identity was not checked.

Vertical publications need their own treatment

Portrait video exists in the inspected output; a recurring short-form design system is not yet established by this sample.



LI04 / LinkedIn / Portrait native video poster

LinkedIn
Merry Balloon uses a portrait poster. The caption says the footage is a concept, not actual footage.

YS01 / YouTube / One visible Shorts cover

YouTube Shorts
One visible cover uses a toy-like people montage with an outlined Chinese hook. Do not generalize from one item.

WB04 / Weibo / 10-second video cover preview

Weibo
A player interview/promo cover uses Chinese and English subtitles over live-action footage.

Production recommendation
Create a dedicated 9:16 edit when publishing vertical video. Reframe people and captions deliberately; do not simply crop a landscape master.

Separate the visual elements

These observations are a component inventory, not a newly invented corporate identity.

LOGO

The compact white bilingual lockup repeats in brand-owned cover corners and video frames. Seasonal work also includes partner marks in a separate block. Use approved master assets; do not trace these screenshots.

TWO DIFFERENT GRAPHIC MOTIFS

Diagonal strips frame practical guides. Fine arcs and straight court-like lines define monthly and some corporate editorial pieces. They serve different families.

IG03 red field

#CB0F41

IG01 purple field

#8170B4

WB02 teal field

#78BEC6

WB02 olive field

#8C934F

Swatches are approximate single-pixel samples from the shown raster references. Gradients, compression and image rendering affect them. They are not official brand colour specifications or approved print values.

Typography, icons and spacing are separate decisions

Use the hierarchy demonstrated by each family; the exact font files and formal brand measurements were not available.

TYPOGRAPHY

Practical cards: heavy sans-serif Chinese, smaller sans-serif English, compact facts and disclaimers. Documentary covers: expressive Chinese lettering and italic English. Promoter typography follows the event.

ICONS

Operational cards use simple outline symbols, frequently red/burgundy gradients. The water card uses a blue droplet. Prohibited-item lists use repeated ban symbols. Keep icon meanings distinct from decoration.

SPACING AND GEOMETRY

Purple covers use a square white panel; red reminders use a rounded white panel; monthly cards alternate image and information areas. Preserve each family’s geometry. No official pixel margins were inferred.

Recommended production practice: obtain original fonts and templates. Until then, approve a CJK-capable sans-serif substitute explicitly; do not label Arial or any guessed font as KTSP’s actual typeface.

Highlights are a navigation system

The Instagram profile separates evergreen visitor needs into six colour-coded entry points.

VISIBLE LABEL	ROLE	OBSERVED VISUAL
HOW TO GO / OFFERS	Transport / promotions	Green / orange circles; white line icons
REMINDERS / EVENTS	Visitor rules / event discovery	Pink / red circles; white line icons
SHOP & DINE / TICKETS	Retail and dining / ticketing	Blue / purple circles; white line icons

The screenshot verifies cover icons and labels only. The Stories inside each Highlight were not inspected. These six cover colours should not automatically become six categories for every feed post.

Copy and language change by channel

The observed brand voice is practical in visitor information, celebratory in sport and conversational in seasonal promotion.

SURFACE	OBSERVED PATTERN	MATCHING GUIDANCE
Instagram artwork	Traditional Chinese frequently leads; English supports event guides, reminders and monthly covers. Promoter art varies.	Preserve the artwork hierarchy. Do not claim a caption formula: Instagram captions were not inspected.
LinkedIn captions	English-led headline and short paragraphs; bold Unicode emphasis; facts and outcomes; thanks, credits and hashtags.	Lead with the professional or community significance. Carry specific evidence, partners and photo credits when relevant.
Weibo captions	Simplified Chinese, emoji-led sections, practical date/venue/ticket fields and hashtags. Seasonal copy uses save/share-style prompts.	Localise naturally. Keep factual event fields structured; adapt tone to service, sport or lifestyle content.
Weibo artwork	Simplified Chinese is visible in WXV reminders and the Halloween poster. English remains on many graphics.	Treat language variants as separate approved files. Do not assume every cross-post uses identical artwork.
YouTube titles/covers	Many listings are bilingual; Chinese usually carries greater visual emphasis on service/event thumbnails.	Keep the title, cover and video subject aligned. Use the correct series typography.

Source anchors: IG01-03 and IG08-10; LI01-10; WB01-05; YT01-24. Actual internal language approval processes are unknown.

Publication formats: still images and documents

Observed ratios are separated from suggested production canvases. CDN previews are not original export specifications.

PUBLICATION	OBSERVED EVIDENCE	PROPOSED BUILD CANVAS
Single feed image	IG04/11 about 4:5; IG05/06/12 about 3:4. WB01 original 960 × 1200 (4:5).	1080 × 1350 for 4:5; 1080 × 1440 for 3:4. Preserve approved supplied artwork where practical.
Carousel / image set	IG: 6 cover badges in 12 posts. WB02: 15 × approximately 4:5. WB03: 10 × 3:4.	Use one consistent canvas within a package. Build cover, body and reference-page variants separately.
Photo album	5 of 10 LinkedIn posts. Three albums shown on page 14; source photos have varying dimensions.	Deliver original photographs plus deliberate lead-image crops. Native platform mosaic is not an authored template.
Designed collage	LI07 is one authored image with red gutters, message tile and footer.	Use an editable grid, separate photo slots and a protected brand footer. Export as a single image.
PDF document	LI01 and LI10 previewed. LI10 shows 8 pages. Page trim dimensions not verified.	Set the page size before design; preserve consistency. Export PDF and inspect every page. Do not infer a universal 8-page rule.
Highlight cover	Six circular profile cover icons inspected; story contents inaccessible.	Prepare a square master with centered icon and label; check the circular crop in the live preview.

These canvas sizes are recommendations, not claims about platform maximums. Preview every post in its target placement before scheduling.

Publication formats: motion and delivery

The thumbnail, video frame and in-feed preview are three different assets or views.

ASSET	OBSERVED	RECOMMENDED PRODUCTION
Landscape video	YouTube landscape thumbnails; LI09 poster is 1280 × 720. Sampled YT01 player shows a landscape video.	1920 × 1080 master. Create a separate thumbnail with legible bilingual hierarchy. Keep an editable caption track.
Portrait video	LI04 poster is 640 × 1138, approximately 9:16. WB04 displays a portrait cover; exact video raster unverified.	1080 × 1920 dedicated edit. Check face, subtitle and CTA visibility under the platform UI.
Shorts cover	One visible YouTube Short; served cover preview was 405 × 608, about 2:3.	A preview crop does not establish the video aspect ratio. Build the video and preview cover deliberately and test both.
Runtime	Inspected listings include short promos, event recaps and a long documentary. WB04 displays 00:10; YT01 player 1:08.	Choose duration from the story and placement. No universal 15s/30s/60s rule is supported by this sample.
Files and quality	No original project files, codec settings, colour profiles or export presets were available.	Still graphics: PNG where appropriate; photos: high-quality JPEG. Video: delivery MP4 plus archive master. Check text at phone size.

Recommended export choices above are a practical handoff specification, not recovered KTSP settings. Avoid claiming pixel-safe zones or official limits without testing the actual placement.

The publishing workflows visible in the output

Public posts reveal asset packages and timing. They do not reveal the internal team, software, approval chain or hours spent.

WORKSTREAM	PUBLIC EVIDENCE	REASONABLE WORKFLOW INFERENCE
Event service package	The Weeknd: transport on 22 Oct; security, reminders and event guide on 23 Oct; another transport guide on 24 Oct.	A shared event facts source feeds several specialised service posts. Updates appear near event dates; no universal lead time inferred.
Monthly programme	IG03 + WB02 share the October cover system. Weibo carries 15 images including individual event cards and calendars.	Compile an event list, obtain approved assets, assemble cards, reconcile dates and venues, then publish a complete programme package.
Promoter promotion	IG concert/sport/festival artwork and WB05’s cover/seat-map/VIP/presale pack preserve distinct event identities.	Receive approved promoter assets and ticket facts; check rights, details and local copy before adapting to the channel.
Event and corporate recap	LinkedIn albums document action, audience, people and outcomes. Captions supply context and partners.	Select and credit images, verify results/figures, write the institutional story and choose album, collage or document format.
Video adaptation	Golden Football Dream appears on YouTube and LinkedIn; documentary titles use a separate visual language.	A shared story can have channel-specific titles, covers and uploads. Identical underlying files and publishing automation are unverified.

All workflow steps in the right column are inferred from the published outputs, not a description of KTSP’s confirmed internal operations.

A production workflow that matches the evidence

Recommended operating model for future work. Roles and checks below are proposed, not confirmed KTSP practice.

01

Brief + source of truth

Record event, audience, communication job, dates, venue, ticket URL, owner and update status.

02

Choose publication family

Select operational, monthly, promoter, seasonal, photo story, document or video series before designing.

03

Build an asset package

Separate approved logo, motif, colour treatment, type hierarchy, image, icons, text and footer. Keep promoter artwork linked.

04

Localise + approve facts

Prepare Traditional Chinese, Simplified Chinese and English variants as needed. Route operational facts to the relevant owner.

05

Adapt + preview

Export by placement. Review carousel order, original-to-preview crop, PDF pages, video subtitles and thumbnail legibility.

06

Publish + maintain

Check live rendering and links. Record URLs and versions; replace or correct changed arrangements and keep evergreen Highlights current.

Suggested handoff record: Event ID | publication family | language | canvas | asset owner | fact-check owner | version | publish date | source URL. A corrected fact should trigger a check of every linked variant.

Keep the elements separate in the working files

A clear component model makes the observed systems reusable without flattening their differences.

ELEMENT	KEEP SEPARATE	CHANGE CONTROL
Identity	Approved venue logo; partner logos; campaign logos	Never reconstruct from screenshots. Preserve the supplied bilingual lockup and partner requirements.
Graphic system	Diagonal-strip frame OR court-line motif OR campaign background	Assign by publication family. Keep background and body panel editable independently.
Information	Headline; English support; event facts; CTA; disclaimer	Use distinct fields. Date and venue updates must be traceable across all language and format variants.
Visual content	Hero photo; promoter artwork; icon; map; chart/table	Maintain original files, crop settings and credits. A venue map is a functional asset with its own approval.
Publication wrapper	Cover; inner card; summary table; collage; PDF page; video cover	Maintain separate layouts for separate jobs. A carousel cover does not define every inner slide.
Delivery	Editable master; approved export; caption; alt text; source record	Store by event, language and version. Preview the live crop and retain the final post URL.

Proposed naming example: KTSP_EventID_ServiceReminder_TC_3x4_v03. This guide provides an evidence-backed specification; it does not provide licensed production logo/font assets or editable official templates.

AUDIT CLOSEOUT

Final quality check and evidence gaps

The guide is usable now, with explicit boundaries around what could not be verified.

BEFORE A POST GOES LIVE

Check event name, date, time, venue and ticket link.
Match the chosen publication family.
Check both languages and their factual consistency.
Read the smallest text at phone size.
Review every image in sequence and every preview crop.
Verify logo, partner lockups and photo credits.
Check video subtitles, cover and live links.

STILL UNVERIFIED

Facebook artwork/feed; Xiaohongshu artwork; Douyin posts.
Instagram carousel interiors, captions and Stories.
LinkedIn PDF interiors.
Most video playback, sound and motion details.
Exact official fonts, colour values, spacing and export settings.
Internal roles, tools, approval flow and analytics.

WHAT CHANGED FROM THE EARLIER GUIDE

The earlier off-site references and generic template assumptions have been replaced with first-party post evidence. Navy is not prescribed as a universal field; typography is not falsely identified; carousel, album, collage, document and video formats are separated.

HOW TO USE THE SOURCE LIBRARY

Open the accompanying HTML file to filter the 52 records by channel or publication family. Each record contains actual visual references, evidence depth and a direct post link. Captured previews remain useful if a platform later requires login.

Images belong to their respective owners and are reproduced here as audit references. Use approved original assets for production. All observations were made on 27 October 2026; social feeds and access can change.

YouTube reference catalogue 01-12

All inspected landscape thumbnails. Refer to the source library for full titles, relative dates and evidence depth.

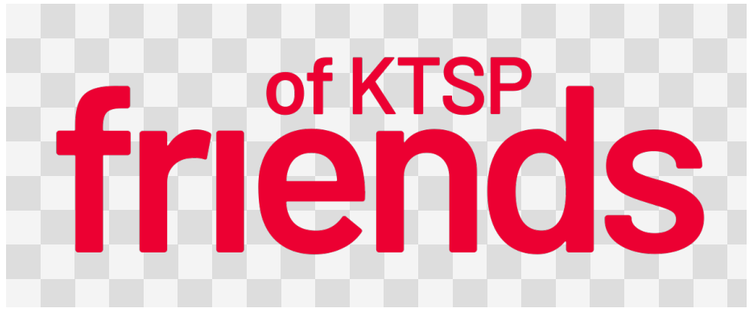
Transparent logos, ready to place

Source logos are kept intact. Vector adaptations and newly drawn components are labelled in the accompanying asset library.

Primary full colour
5071 × 2284 PNG / archived source, unchanged

Primary white
302 × 136 PNG / official PDF source, unchanged

Sports Park + Mall lockup
2000 × 399 PNG / published partner source



Friends of KTSP / red
Original vector paths; UI pill removed.

Friends of KTSP / white
Placement adaptation from the same paths.

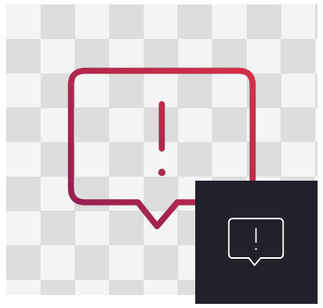
50 asset variants
50 genuine-alpha PNGs
47 SVG files

Download the asset pack, open index.html, and test each mark on light, dark or coloured surfaces.

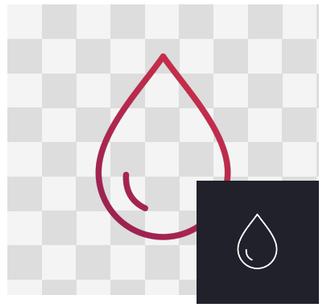
The checkerboard is a preview aid only. No checkerboard is embedded in the assets. The white primary logo is limited by its native resolution; it is not an enlarged or AI-recreated master.

Service icons are separate, editable assets

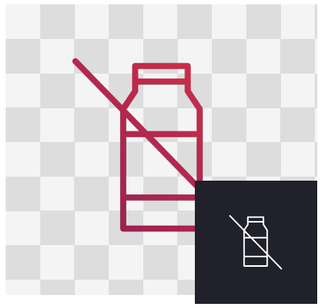
14 symbols, each supplied as gradient-red and white variants: SVG paths plus 1024 × 1024 transparent PNG exports.



Event reminders

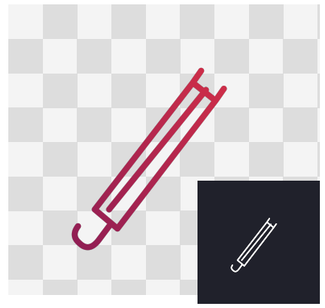


Drinking water

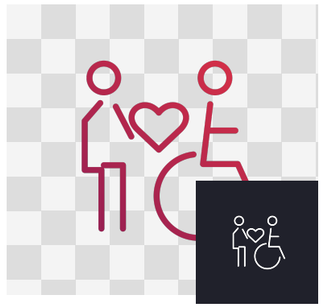


Container restriction

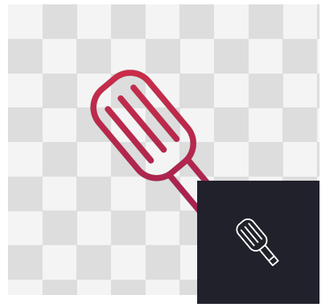
Food and drink restriction



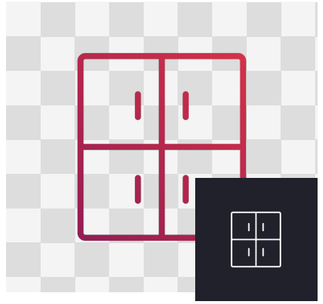
Folded umbrella



Assistance and accessibility

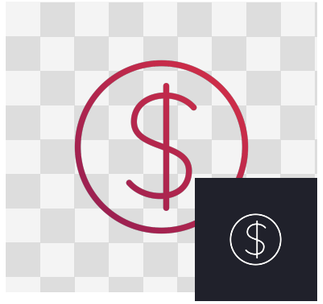


Security screening

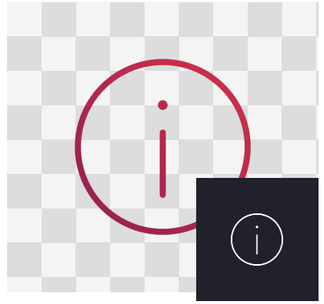


Electronic locker

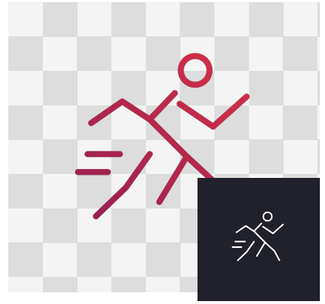
How to go



Offers

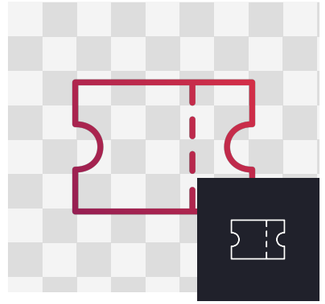


Reminders highlight



Events

Shop and dine

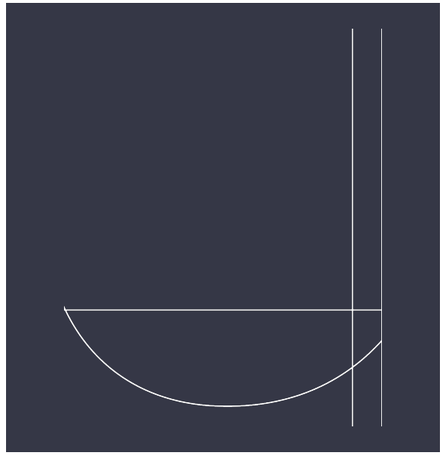


Tickets

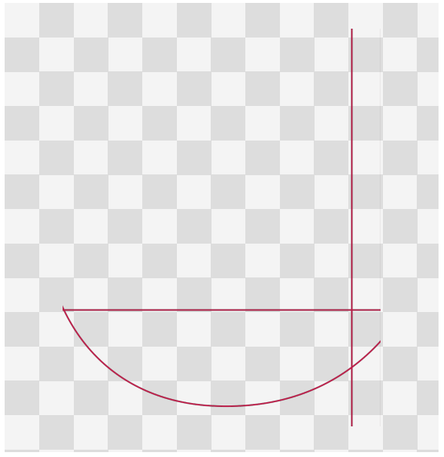
Production status: these are redraws matching the observed outline-icon family, not extracted official masters. Keep each icon as an independent layer. No operational wording, restriction measurement or event-specific rule is built into the asset.

Frames, panels and motifs stay separate

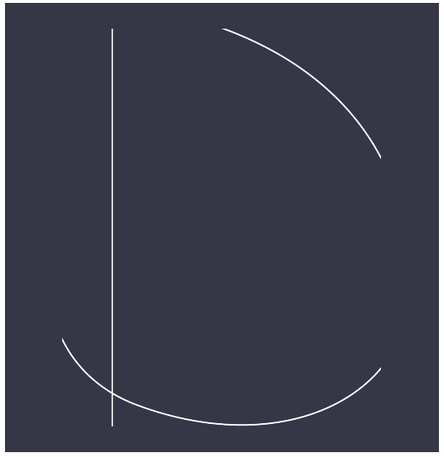
Transparent court lines and strips can sit over a colour or image. The frames have transparent centres; white panels are independent files.



Court lines / white

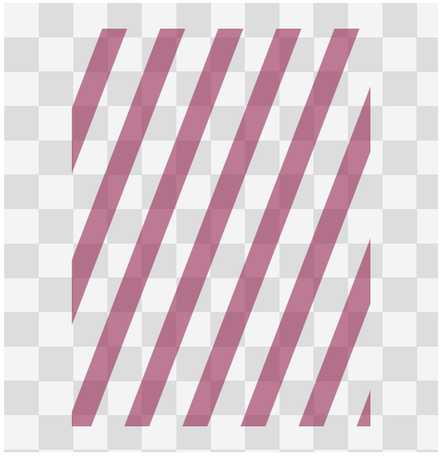


Court lines / red

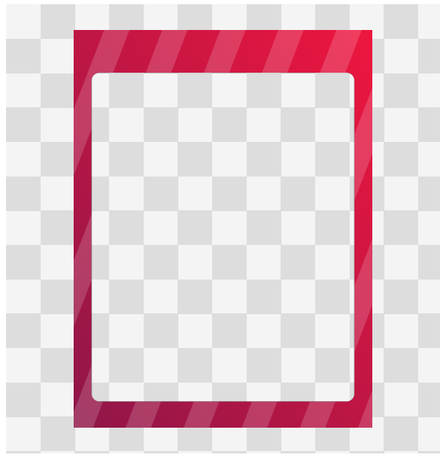


Event-card arc

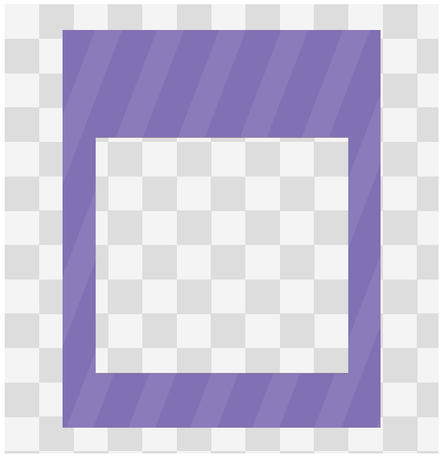
Light diagonal strips



Burgundy strips

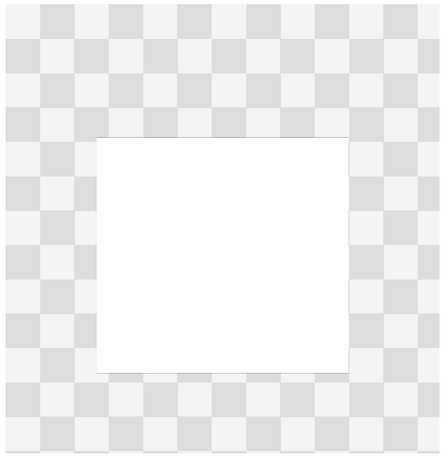


Red frame / open centre

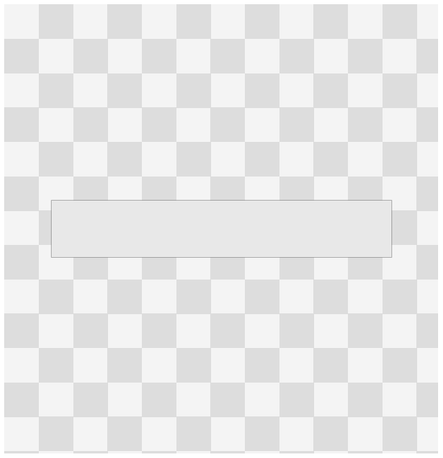


Purple frame / open centre

Rounded white panel



Square white panel



Grey topic/date band

All elements shown are working vector reconstructions based on the audited social families. Colour fields, logos, Chinese and English copy, photographs and legal footers remain separate layers.

Use the files without losing transparency

The companion catalogue, manifest and usage notes make provenance, format and size limits explicit.

Place the actual asset
Use the PNG for slides, documents and general design tools. Use SVG for scalable icons, motifs and vector marks. Download/insert the file rather than copying a screenshot of the checkerboard preview.

Preserve geometry and contrast
Scale proportionally. Keep the supplied logo lockup intact. Choose a colour mark on a light surface or a white mark on a dark surface. Transparent does not mean readable on every background.

Keep the working layers distinct
Colour/photo → motif → optional panel → logo → icon → Chinese headline → English support → event facts → notice. The frame centre is empty until a panel or image is placed behind it.

Native raster limits
Colour logo: 5071 px wide.
Sports Park + Mall: 2000 px wide.
White primary logo: 302 px wide; maximum suggested 151 px at 2× display density, or 25.6 mm at 300 ppi. A larger approved white/vector master remains needed.

Still outside this pack
Dedicated Stadium, Arena and Youth Sports Ground marks; standalone Mall wordmark; official fonts; original motif masters; and third-party event/sponsor artwork were not recovered. The pack is not a complete official brand-master library.

Source and adaptation labels
Native source files, source-vector adaptations and redrawn components are distinguished per file. Public availability does not constitute brand approval.

Handoff: Kai_Tak_Transparent_Asset_Pack.zip contains 97 graphic files, an offline visual catalogue, per-asset source manifest and usage notes. All 50 PNG exports were checked for a real alpha channel and transparent pixels.
